Renewable Energy Certificate Program

Leading the Nation in Environmental Commodity Management

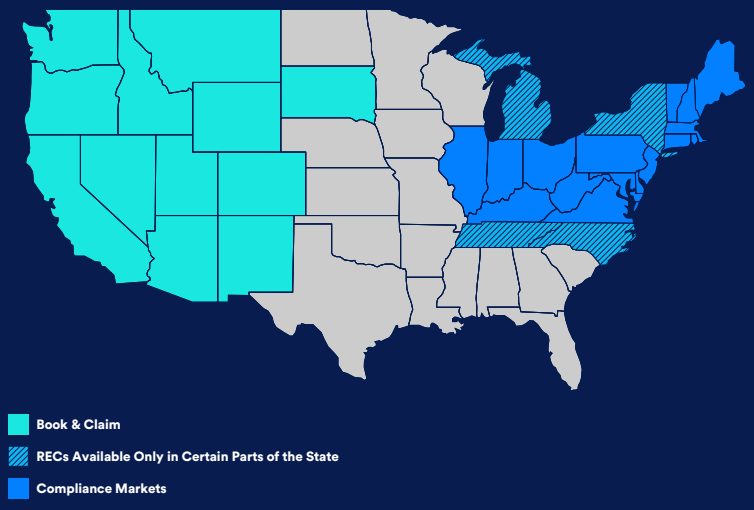

SRECTrade is the largest independent aggregator in the nation, specializing in environmental commodity management and transaction services.

What are SRECs?

Solar Renewable Energy Credits (Certificates) are a production-based incentive that allows owners of renewable energy assets to monetize their electricity generation.

- 1 SREC = One Megawatt-Hour (MWh) of renewable energy generated.
- Certification: SRECs must be generated from facilities certified in a recognized tracking registry.
- Compliance markets follow each state's renewable portfolio standard.
- Book and Claim markets are driven by clean fuel standard programs.

Markets

1 Registration

Seamless paperwork processing for state registration and system application.

2 Automated Reporting

Connect an approved online monitoring system to automatically report solar generation.

3 Monetization

- Marketing and brokerage
- Spot, fixed price, and pre-pay options available.

SRECTrade
AN XPANSIV COMPANY

About SRECTrade

- **$1B+** in environmental commodity value settled on SRECTrade's platform.
- **1.5 GW+** renewable energy assets on the platform.
- **100,000+** solar power systems under management.
- **20+** states served.
- **20+ REC** products transacted.
